

ABSTRACT OF THE DISCLOSURE

A lighting installation for household appliances having an interior in which a bracket for receiving support shelves is arranged. The lighting arrangement includes an illuminating device integrated into at least a partial area of the bracket or entirely into the bracket. The illuminating device can include a fluorescent tube or an arrangement of a plurality of light-emitting diodes. Alternatively, at least a partial area of the bracket can be embodied as an optical waveguide, into which the light from a light source not arranged in the interior can be introduced.
